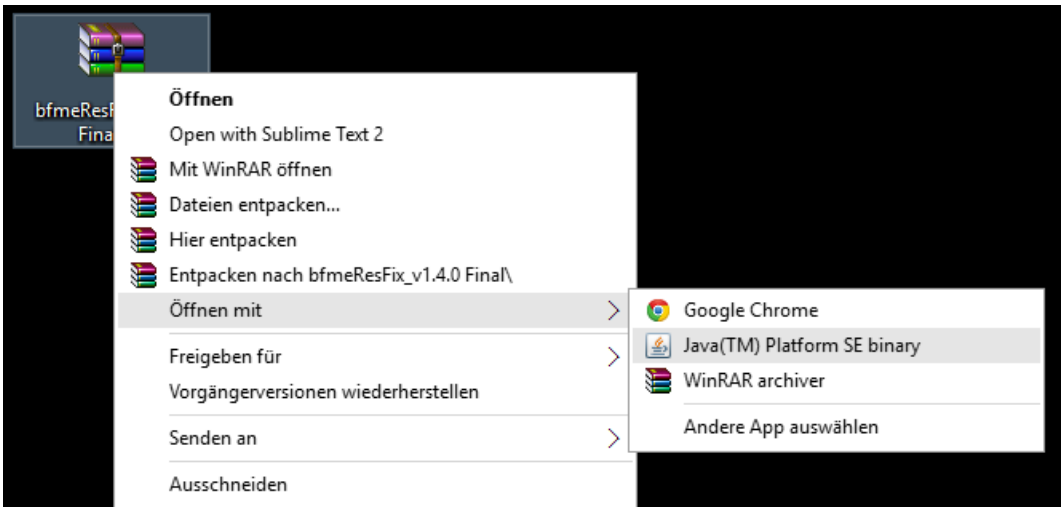
Anleitung:

1. **Download the Java-.jar-File under:**
   http://www.mediafire.com/download/pkmtcw1gb5cgqs6/bfmeResFix_v1.4.0+Final.jar

   Browsers like Google Chrome demand for a security check.
   Dont worry, the program is virus-free:
   https://www.virustotal.com/de/url/f01fafcf82a15e6494b9172f6f97f4065766879cb6c8c12da93c7c5f7f33eb7d/analysis/

2. **Start the downloaded Java-.jar-File with Java Platform SE binary.**

   If it is not in your list, you need to install the latest Java-version:
   https://www.java.com/en/download/



3. **Choose you game by clicking through the tabs.**

4. **Choose the Language in which you've installed the game and select your preferred resolution.**
   Note:
   - *Your current monitor-resolution is auto-selected.*
   - *Your preferred resolution should not be larger than your monitors resolution, because the game has no support for Decimation [1] like Nvidia DSR[2].*

[1] https://en.wikipedia.org/wiki/Decimation_(signal_processing)
[2] http://www.geforce.com/hardware/technology/dsr/technology

5. Apply changes

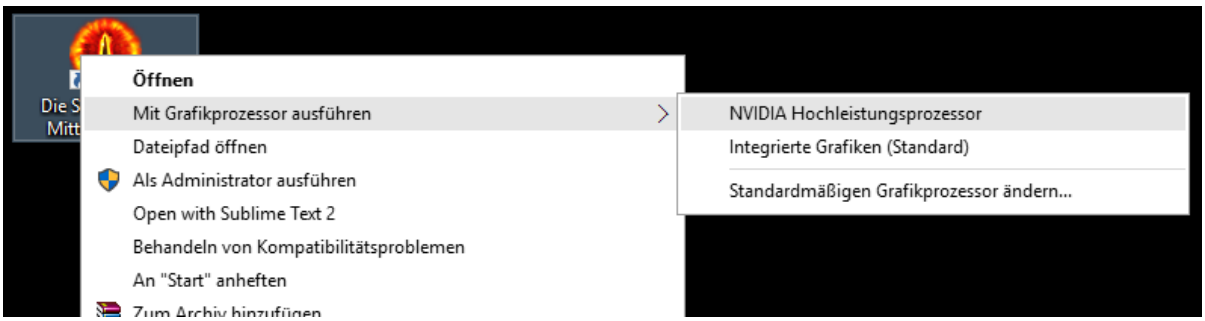
A pop-up will appear (see Figure).

- *„Done! (Created + Path)“ – The file did <u>not</u> existed before and has been generated .*
- *„Done! (Edited + Path)“ – The file existed before and has been edited.*
- *Repeat Step 4 and 5 for every „Battle for Middle-Earth“-Game.*

6. Start the game

Note:

If you have a computer with two graphics processing units you need to start the game with your dedicated GPU, to avoid game-crashes. (In this example: use the „NVIDIA High-performance-processor“).



Hint:

If you want to manually patch the game, just go to my Mediafire-Folder:
https://www.mediafire.com/folder/s50wrxf0a7w0s/Patches_for_The_Battle_for_Middle-Earth-Trilogy
