Instructions:

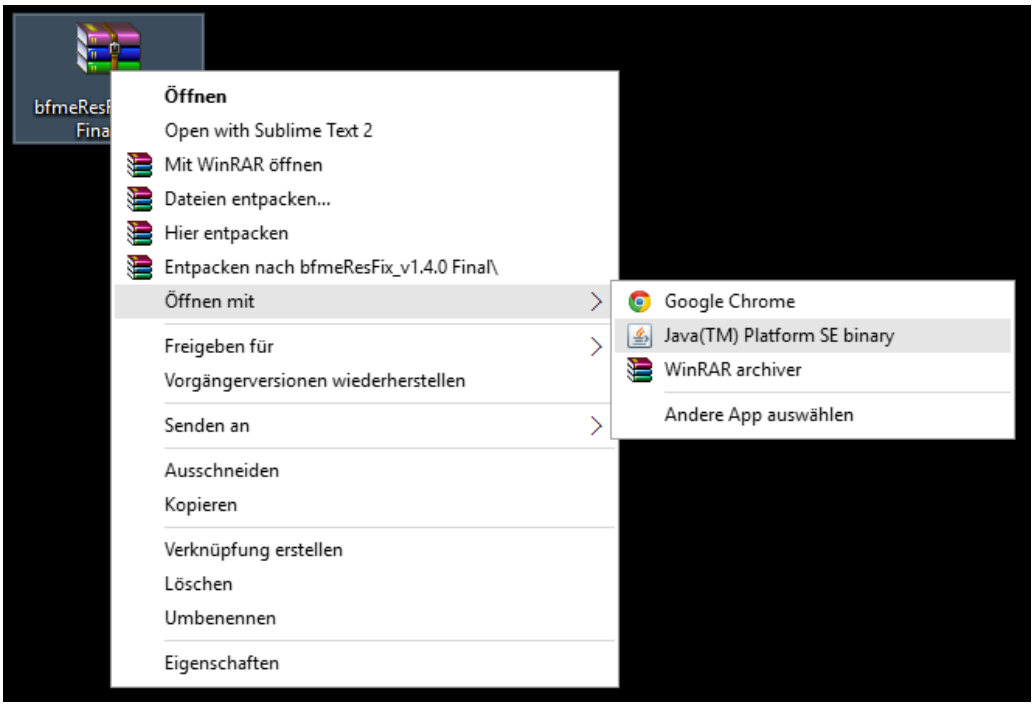
1. **Download the Java-.jar-File under:**
   http://www.mediafire.com/download/pkmtcw1gb5cgqs6/bfmeResFix_v1.4.0+Final.jar

   Tested for viruses:
   https://www.virustotal.com/de/url/f01fafcf82a15e6494b9172f6f97f4065766879cb6c8c12da93c7c5f7f33eb7d/analysis/

   
   Browsers like Google Chrome demand a security check.

2. **Start the downloaded Java-.jar-File with Java Platform SE binary.**

   You might need to install the latest Java-version: https://www.java.com/en/download/

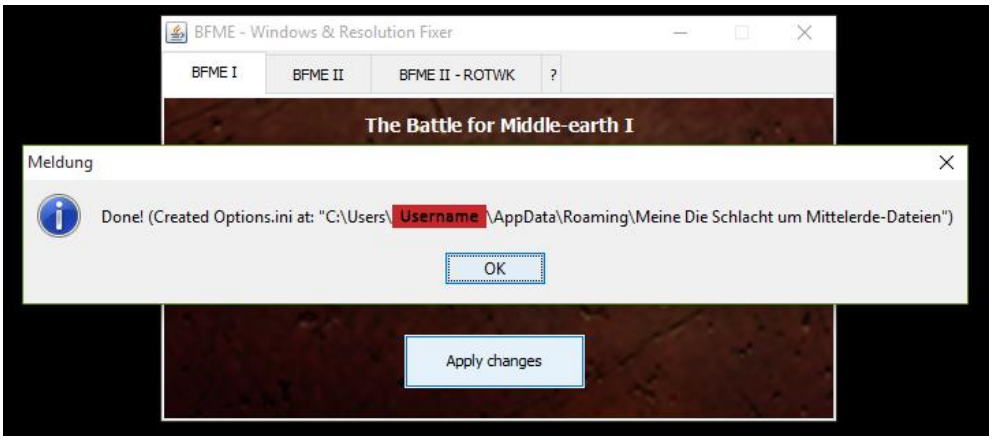
3. **Choose the Language in which you've installed the game and select your preferred resolution.**
   Note:
   - *Your current monitor-resolution is auto-selected.*
   - *Your preferred resolution should not be larger than your monitors resolution, because the game has no support for Decimation[1] like Nvidia DSR[2].*

[1] https://en.wikipedia.org/wiki/Decimation_(signal_processing)
[2] http://www.geforce.com/hardware/technology/dsr/technology

4. Apply changes

A pop-up will appear (see Figure).

- *„Done! (Created + Path)“ – The file did <u>not</u> existed before and has been generated .*
- *„Done! (Edited + Path)“ – The file existed before and has been edited.*



5. Start the game

Note:

If you have a computer with two graphics processing units you need to start the game with your dedicated GPU (In this example: use the „NVIDIA High-performance-processor“)

Hint:

If you want to manually patch the game, just go to my Mediafire-Folder:
https://www.mediafire.com/folder/s50wrxf0a7w0s/Patches_for_The_Battle_for_Middle-Earth-Trilogy
